ArenaProjekt are arena developers with skills from F&B, Elite sports, events, concerts and more!

We are first in the project because we both see and understand the big picture!

We help you to develop ideas around the arena. Arena development, the arena concept, the master plans, revenue analysis, budget calculations, modelling and contract calculations are just some of the services we offer.

We help you with; what to do, how to do it, what you've got to think about and what skills you're going to require.

We understand the whole concept so to engage us as a partner where we take a comprehensive approach means that we take forward the conceptual solution and develop the project with everything from early sketches and budgets to tender documents.

Building Information Modelling, 3D Planning is a way to quality control and improve your building information throughout the whole projects lifetime and for us it's a normal way of working delivering more information than traditionally.
